

How to Get a Bonus

As I told you in class, I will prepare a chance for you to get a bonus. I want you to register a [leetcode](#) account and solve some problems there. **Leetcode** is the most famous online judge system in the world. Most people do lots of practice before their job interview. Frankly speaking, I want you to practice lots of problems here in your university life. This may help you find a good job after school.

If you want to get bonus points, you need to follow these steps.

1. You need to register an account.
2. You need to solve problems there. One solved problem will give you an **additional 0.5 point**.
3. For each solved problem, you need to submit your **screen capture of your acceptance (your ID included)**、**source code**、**source code detailed description in Chinese except some foreign students**.
The description is a note to explain how you solve the problem and how your code executes in detail. Comments are not enough.
4. **The max extra points are 5.**

The due date is **2022.01.19 PM 11:59**.

My suggestion is: pick those problems labeled **easy**. There are lots of things you need to learn before you can solve medium or hard problems. **I hope that you can practice more problems after you take data structure and algorithm classes.**
