bonus

> Q:What is "%n" meaning in printf-func of C?

> A:Retrieve the string before the %n position, the length of the string will be stored in the variable that you declared. Example code is bonus.c,and execute file is bonus

Code

```c
#include <stdio.h>
#include <stdint.h>

int main()
{
    printf("$ ./bonus\n");
    int32_t front_index;
    printf("\n===Example===\n");
    printf("This is a%nn apple\n",&front_index);

    printf("\nTruncated string: This is a\n");
    printf("String length: %d\n",front_index);//front_index = 9
    return 0;
}
```

Result

```
ryan@linxinruis-MacBook-Air hw06 % ./bonus
$ ./bonus

===Example===
This is an apple

Truncated string: This is a
String length: 9
